

To Whom It May Concern:

This is to certify that Barama SE participated on the Stage 2 archaeological survey of the Baku to Ceyhan Pipeline during September 2002. Barama SE provided an excavator to excavate trenches to seek archaeological features in several areas around Yevlakh on the pipeline route. Barama SE provided a machine that met the health and Safety requirements for work on the pipeline project. The machine operator, Ali Guliyev, performed all the tasks with due diligence and observed all the procedures required of staff working on the pipeline project.

I would be pleased to work with Barama SE again in future, either on this project, or other work.

Yours sincerely,

Richard Moore
